Forms in HTML

The HTML <form> element defines a form that is used to collect user input. An HTML form contains **form elements**. Form elements are different types of input elements, like: text fields, checkboxes, radio buttons, submit buttons, and more.

It will appear in a browser like:

First name:
Last name:

The < label > Element

- The <label> tag defines a label for many form elements.
- The <label> element is useful for screen-reader users, because the screen-reader will read out load the label when the user is focused on the input element.
- The <label> element also help users who have difficulty clicking on very small regions (such as radio buttons or checkboxes) because when the user clicks the text within the <label> element, it toggles the radio button/checkbox.

• The for attribute of the <label> tag should be equal to the id attribute of the <input> element to bind them together.

Radio Buttons

<input type="radio"> defines a radio button. Radio buttons let a user select ONE of a
limited number of choices.

It will appear in a browser like:

- [©] Male
- Female
- Other

The Submit Button

<input type="submit"> defines a button for submitting the form data to a formhandler. The form-handler is typically a page on the server with a script for processing input data. The form-handler is specified in the form's action attribute.

Frames in HTML

HTML frames are used to divide your browser window into multiple sections where each section can load a separate HTML document. A collection of frames in the browser window is known as a frameset. The window is divided into frames in a similar way the tables are organized: into rows and columns.

HTML <frameset> Tag

To use frames on a page we use <frameset> tag instead of <body> tag. The <frameset> tag defines how to divide the window into frames. The rows attribute of <frameset> tag defines horizontal frames and cols attribute defines vertical frames. Each frame is indicated by <frame> tag which defines which HTML document shall open into the frame.

Example:

```
<frameset cols="25%,50%,25%">
    <frame src="frame_a.htm">
     <frame src="frame_b.htm">
     <frame src="frame_c.htm">
     </frameset>
```

Frame Tags

Tags	Description
<frameset></frameset>	Defines a set of frames
<frame/>	Defines a sub window (a frame)
<noframes></noframes>	Defines a noframe section for browsers that do not handle frames
<iframe></iframe>	Defines an inline sub window (frame)
